Android Developer Task

1. Create a login interface.
   - Fields on login page
     - User Type : Dropdown Menu (Options: Executive, HOD, Manager) with validation
     - Username: Text input field with validation
     - Password: Text input field with validation
   - Use this API for authenticating
     - API : https://uatrelwebapi.azurewebsites.net/api/user/user/UserLogin
     - Type: POST
     - JSON:
       {
         "userName": "string",
         "password": "string",
         "userType": "string"
       }
       This API will give all the data of the user.
     - Use this login credentials:
       userName: "test",
       password: "test12345",
       userType: "Executive"

       If user Type, Username and Password match in the database show user name and user type on the app bar of landing page from the data received from the API.

2. Design
   - Fetch data from this API : https://jsonplaceholder.typicode.com/todos
   - Represent only first 20 data in landing page.
   - Represent the data based on your judgement (in Table, Card and Field etc.)
3. Logout
   - A logout button to reach back to the login page.
